PROFILE

Flutter Developer with 1 year of experience building cross-platform mobile applications using Flutter and Dart. Skilled in state management, RESTful API integration, Firebase, and scalable app architecture. Focused on delivering clean, maintainable, and high-performance applications that provide seamless user experiences.

EXPERIENCE

Flutter Developer (Part-Time)

Mar 2026 - Present

[Freelance Project — Wratil](#) - Remote

A digital ecosystem connecting students with certified Quran teachers via real-time video sessions, smart booking, and an AI-powered advisory system.

Technologies: BLoC, Clean Architecture, Retrofit/Dio, Agora RTC, Pusher, Localization, Google Gemini

- Integrated Agora RTC and Pusher for real-time voice/video sessions and live notifications.
- Built a commerce ecosystem with digital wallets, subscription packages, and automated booking.
- Secured API communication using Retrofit/Dio interceptors and encrypted local storage for token management.

Flutter Developer (Part-Time)

Dec 2025 - Feb 2026

[Freelance Project — Hala Bakeries ERP](#) - Remote

Production-grade B2B ERP system automating multi-branch inventory control, employee operations, and sales auditing for a large bakery distribution network.

Technologies: BLoC/Cubit, Firebase Firestore, GoRouter, GetIt, Mobile Scanner, Excel, PDF & Printing.

- Dual-Role Architecture: Designed and built a modular Clean Architecture application with separate, role-based workflows and states (Cubit) for Administrators and Employees.
- RTL Arabic PDF & Excel Exports: Developed dynamic document services handling custom Cairo fonts and Right-to-Left (RTL) text shaping to print/share corporate audits and invoices.
- Optimized Firestore Sync: Created cloud synchronization repositories utilizing WriteBatch chunked into 500-record sets to respect API limits and reduce network overhead.
- Stock Audit & Hardware Integration: Built a stock tracking engine ($\text{Sales} = \text{Opening} + \text{Received} - \text{Damaged} - \text{Actual}$) integrated with mobile_scanner for barcode-based goods reception and inventory counts.

Mobile Developer (Flutter Intern)

Sep 2024 - Oct 2024

[Instant Software Solutions](#) - Remote, Cairo, Egypt

Technologies: Flutter, Dart, REST APIs, Local Storage, Git, Clean Architecture

- Developed responsive, user-friendly interfaces following modern UI/UX principles, improving user engagement by 25%
- Integrated REST APIs with Retrofit/Dio, ensuring seamless data flow and offline functionality using SQLite/SharedPreferences
- Debugged and resolved 15+ critical issues, reducing app crashes by 30% and enhancing stability
- Implemented Clean Architecture, reducing code redundancy by 40% and improving maintainability

PROJECTS

[Jobizz — Career Platform \(Graduation Project\)](#)

Mar 2025 - Jul 2025

Production-grade career platform built with Flutter and Clean Architecture, designed to connect job seekers with opportunities through a secure, scalable, and responsive mobile experience.

Technologies: Flutter, Dart, Retrofit/Dio, GetIt, Freezed, Secure Storage, Lottie, PDF Viewer

- Architected a scalable Flutter application using Clean Architecture and BLoC/Cubit, ensuring a modular and fully testable codebase.
- Implemented JWT authentication, Google Sign-In, and OTP verification with secure token handling and local storage.
- Developed an advanced search and filtering system across 30+ screens and 20+ API endpoints for real-time job discovery.
- Solved concurrent token refresh issues by building a custom Dio interceptor, improving session reliability and overall app stability.
- Built a complete career hub featuring multi-step job applications, application tracking, and PDF resume preview.
- Delivered a responsive and pixel-perfect UI across multiple screen sizes using ScreenUtil, Shimmer, and Lottie animations.

Home-Ease

Nov 2024 - Feb 2025

mobile app providing home services (electrical, plumbing, carpentry) with subscription options and multiple payment methods, including electronic and cash payments

Technologies: Flutter, Dart, Bloc, REST API (Retrofit/Dio), Firebase, Local Storage, Localization

- Built a multi-language app using easy_localization, supporting 2 languages with asset-based translations.
- Structured Clean Architecture with dependency injection (get_it) and API layer (Retrofit).
- Optimized UI with flutter_screenutil for adaptive layouts and SVG assets.

Ecommerce-app

Sep 2023 - Feb 2024

Mobile storefront with product listings, cart, and delivery tracking.

Technologies: Flutter, Dart,GetX, Firebase, REST APIs (HTTP), Local Storage (SQFlite, Shared Preferences), Google Maps

- User Registration and Login: Secure and streamlined user authentication processes.
- Added address mapping for delivery logistics.
- A rich, searchable, and filterable product catalogue with detailed descriptions, images, and reviews.
- Easy-to-use shopping cart.

EDUCATION

Master's Degree in Computer Science (Higher Technological Institute, Beni Suef)

Sep 2021 - Jul 2025

Overall Grade: Excellent (85%)

SKILLS

Languages & Frameworks: Dart, Flutter

Architecture & State Management: Clean Architecture, MVVM, BLoC/Cubit

Backend & Integration: RESTful APIs, Firebase, Http, Dio, Retrofit

Local Storage: SQLite,, SharedPreferences, Secure Storage

Software Principles: OOP, SOLID Principles, Clean Code, Responsive & Adaptive Design

DevOps & CI/CD: Fastlane, Firebase App Distribution

Tools: Git, GitHub, Postman, Figma

LANGUAGES

Arabic (Native), English (good)
